# Bi-weekly Log of GenAI interactions

Student: Dhanush Kumar Ramesh

Project: Yield-Aware Inverse Design of High-Speed Interconnects: A Physics-Constrained Generative Approach

All significant interactions with GenAI must be logged. ***You will be required to upload a file to LOOP containing the entirety of your GenAI interactions every two weeks.*** This log in conjunction with the upload will allow you to summarize your interactions according to the TOPIC format recommended in the Guidelines for the Use of GenAI in Masters Projects. If you have no interactions, please write none in the appropriate section.

| **GenAI Interaction Week 8-9** | |
|---|---|
| **Tool** *Name and model and date used* | Google Gemini – 25/02/2026 |
| **Output, Prompts, and Iterations**<br><br>*Provide a copy of the outputs you generated from the tool(s) you used, exactly as they were provided by those tools. Please provide a link or details of the file uploaded to Loop* | I used genAI to brainstorm ideas<br><br>Link: https://gemini.google.com/share/d3395f2d05da |
| **Critical Analysis**<br><br>*Please briefly describe the benefits and shortcomings of the interaction and how you have incorporated it into your project* | I used genAI to brainstorm ideas and also come up with a strategy to clean the dataset from the SI/PI database. |
