

project meeting minutes

Date: 10-06-2026

Location: Stokes Building, DCU.

Attendees: Dhanush Kumar Ramesh (Student), Dr. Marissa Condon(Supervisor)

1. Agenda

- Discuss on the project progress

2 Key Discussion Points

1. Try the other methods to improvise the inverse model.
2. Validate the predicted geometry with openEMS simulation.
3. Try to study and investigate which frequency range is important and which can be ignored.
4. Keep a plan to generate own points to increase the dataset but for now prioritize on the model which is already designed.
5. Send short reports on the progress and important checkpoints/improvements and also send a draft of the data pipeline section of the final report to review.

3. Decisions Made

- Try to validate the output generated by the inverse model using openems to check the authenticity of the geometrics generated.
- try to study the frequency by assessing the relative importance of regions of the frequency range, see if it could be split into regions of varying importance and if this could inform a process for combining the regions.

4. Action Items

| Task | Deadline | Status |

| :--- | :--- | :--- |

| **1. Design and implement inverse model with the frozen weights from the forward model**

| Immediate | **Completed** Inital design |

| **2. Do an EDA on the frequency range to study the importance of the regions** | Immediate

| in progress |

| 3. implement openEMS to validate the design and geometrics generated by the inverse model and compare with ground truth | Immediate | in progress |

Next Meeting

Date: 24-06-2026 (tentative)
